

Nihalurrahiyan (Nihal) A

Software Engineer | Backend Developer | Database Developer
nihalurrahiyan@gmail.com | +91 96053 67589 | <https://nihalurrahiyan.netlify.app/>

PROFESSIONAL SUMMARY

Database Developer with nearly 2 years of experience designing, optimizing, and maintaining ERP database solutions across Logistics, Financial Management, and Work Management systems using Microsoft SQL Server and PostgreSQL. Experienced in stored procedures, query optimization, data modeling, and backend integrations, with proven results including an **87% reduction in execution time (120 minutes to 15 minutes)** and a **70% reduction in production database size (78GB to 20-24GB)**.

TECHNICAL SKILLS

Databases: MS SQL Server, PostgreSQL, MySQL

SQL Development: T-SQL, PL/pgSQL, Stored Procedures, Functions, Triggers, Views, Window Functions, CTEs

Performance Optimization: Execution Plans, Index Tuning, Query Profiling, Query Optimization

Data Engineering: JSON Processing, Data Modeling, Relational Database Design, ETL Concepts

Tools: SSMS, SQL Server Agent, PgAdmin, SQL Server Profiler, Git, HTML/CSS

PROFESSIONAL EXPERIENCE

Bayasys InfoTech, Kochi | Software Engineer (Database Developer)

Jan 2025 – Present

- Developed and optimized database solutions for Logistics ERP, Financial Management, and Work Management systems using Microsoft SQL Server and PostgreSQL.
- Developed stored procedures, functions, and backend database logic for ERP modules and API integrations.
- Optimized SQL queries, reports, and database performance while resolving production support issues and data inconsistencies.
- Investigated and resolved database-related support tickets, ensuring data accuracy and system reliability.
- Developed metadata mapping procedures for OCR workflows and backend integrations.

Bayasys InfoTech, Kochi | Programmer Trainee

Sep 2024 – Dec 2024

- Quickly became proficient in PostgreSQL and T-SQL, developing production-ready stored procedures and triggers within the first 90 days.
- Analyzed a large-scale ERP logistics platform, mapping business requirements to backend data flows.

PROFESSIONAL HIGHLIGHTS

Logistics ERP

- Optimized a legacy year-end carry-forward process, reducing execution time by **87% (120 minutes to 15 minutes)**.
- Reduced production database size from **78 GB** to approximately **20–24 GB** by implementing automated log retention and optimizing scheduled carry-forward execution, significantly lowering storage usage without impacting system performance.
- Developed stored procedures to transform logistics billing data into the JSON format required by a third-party Malaysian tax filing platform.

Financial Management System

- Designed and implemented a conflict-free **database synchronization framework** between branch and head-office servers using export/import procedures.

Work Management System

- Developed HRMS modules including attendance processing, leave management, shift configuration, salary components, attendance finalization, and employee punch tracking.
- Designed a metadata-driven attribute framework that replaced multiple module-specific configuration tables with a single reusable structure, improving flexibility and simplifying database maintenance.
- Implemented responsibility transfer functionality to support seamless reassignment of work across users.
- Built backend procedures supporting employee attendance dashboards and frontend APIs.

EDUCATION

KMCT College of Engineering | B.Tech, Computer Science

Nov 2020 – May 2024

GBHSS Manjeri | Higher Secondary Education, Computer Science

Jul 2018 – Mar 2020

AWARDS & ACHIEVEMENTS

- Winner:** “Untangle” Inter-College Debugging Competition, KMCT CEW (2023)
- Winner:** Code Debugging Competition, G20 TechnoFrenzy (2023)
- Performance Merit:** Commended for independent architectural design and rapid deployment of the Carry forward Automation system at Bayasys InfoTech
